Document Management Platform

## INFOGRAPHIC

### SharePoint and No-Code Configuration for Document Management How Businesses Can Reap 80% in Savings

SharePoint is widely used by medium-sized and large enterprises as a document management and collaboration platform. But doing so comes at a hefty cost.

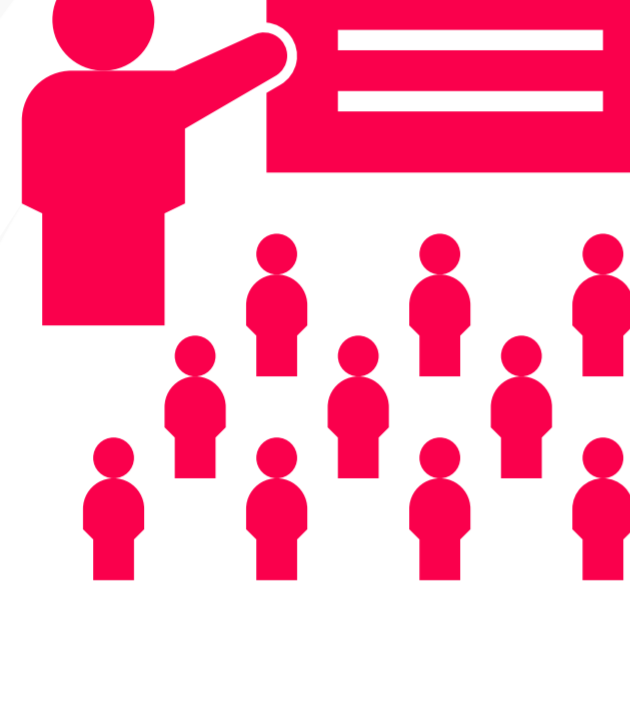

In fact, **organizations can expect to pay upwards of \$1M in customization fees** that inevitably incur while evolving SharePoint into a customized tool that will address their exact business requirements.

## The high-stakes costs of SharePoint customization

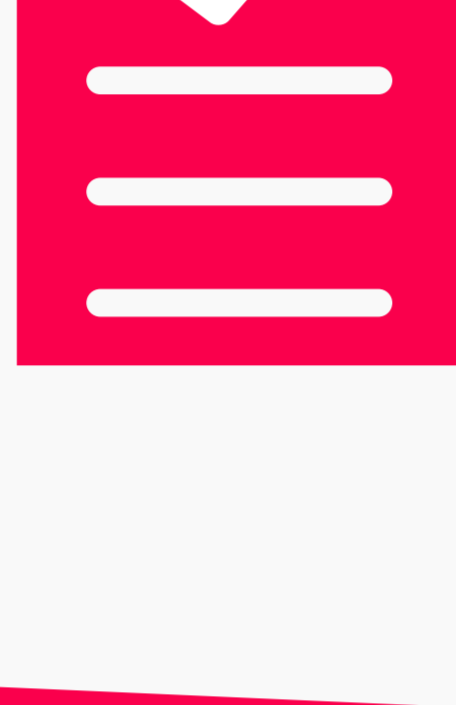

### Consulting fees & customization experts

- New releases, applications, features and add-ons necessitate ongoing customizations, maintenance & management
- Shortage of SharePoint specialists = exorbitant fees for their expertise

### User training & extra support

- Technically complex product for business users to learn to use efficiently
- No dedicated SharePoint team to provide ongoing assistance = need for regular investment in user training

### Security, compliance and reporting

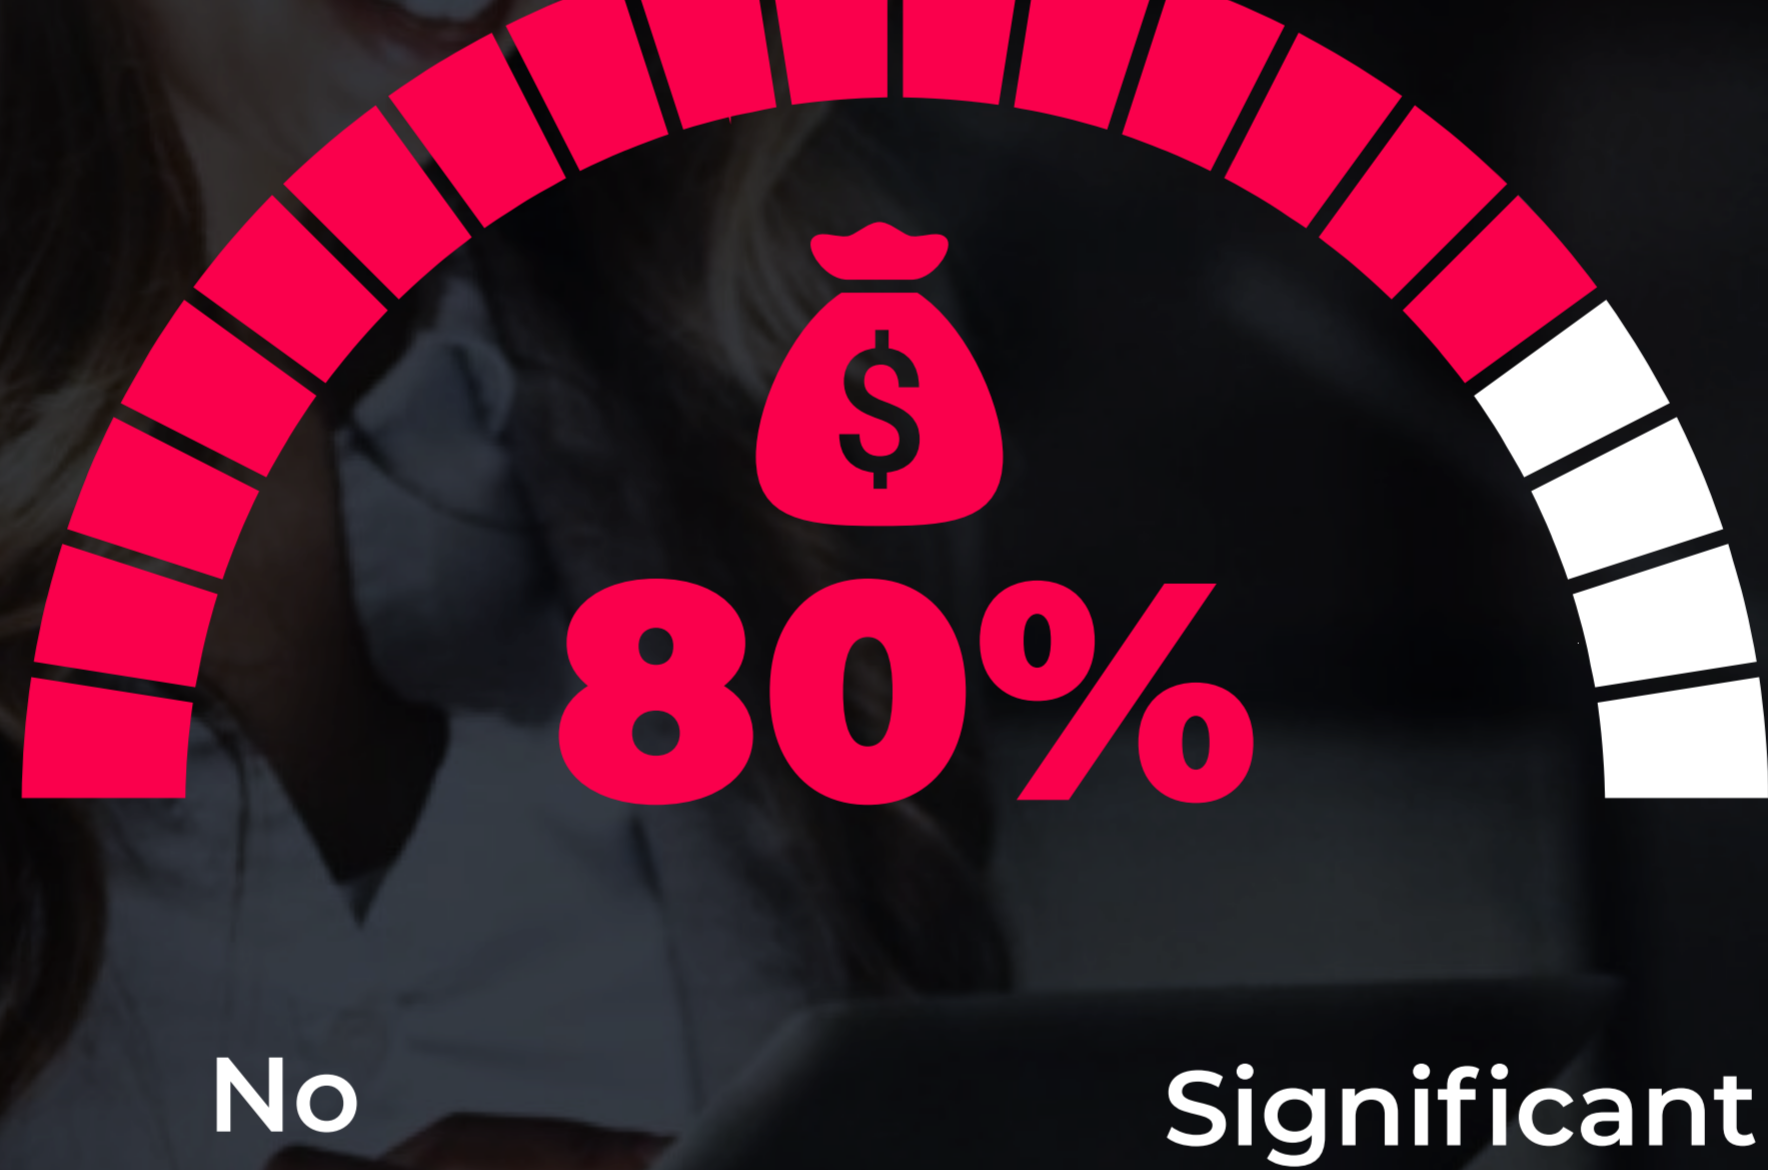

- Employees frustrated in SharePoint often create unapproved workaround solutions, increasing security risks
- "Shadow IT" = costly repercussions of regulatory non-compliance

## Why configuration is Superior to customization

Put simply, customization is not necessary when you use a fully configurable, no-code document management platform that seamlessly integrates with SharePoint:

	Type of Document Management Platform	Level of Coding Expertise Required	Costly Customizations Required?
SharePoint	High-code, low-code, and semi-low-code	Developer / High Level of Coding Expertise Required	Frequent Costly Customizations Required
WorkDynamics (Integrates with SharePoint)	No-code	No Expertise Required	No Costly Customizations Required  Business users can easily configure the alternative platform's native tools & workflows while enabling SharePoint's robust repository feature set

No Customization Necessary = Significant Dollar Savings Up To 80 %

- Easier for business users to learn and use—removing the need for specialized experts
- Little to no need for training
- Decreases risk—because employees are less likely to turn to shadow IT methods

## Other Business benefits of No-Code Configuration

Using an intelligent, no-code document management platform as the integrable control layer with SharePoint, organizations can also:

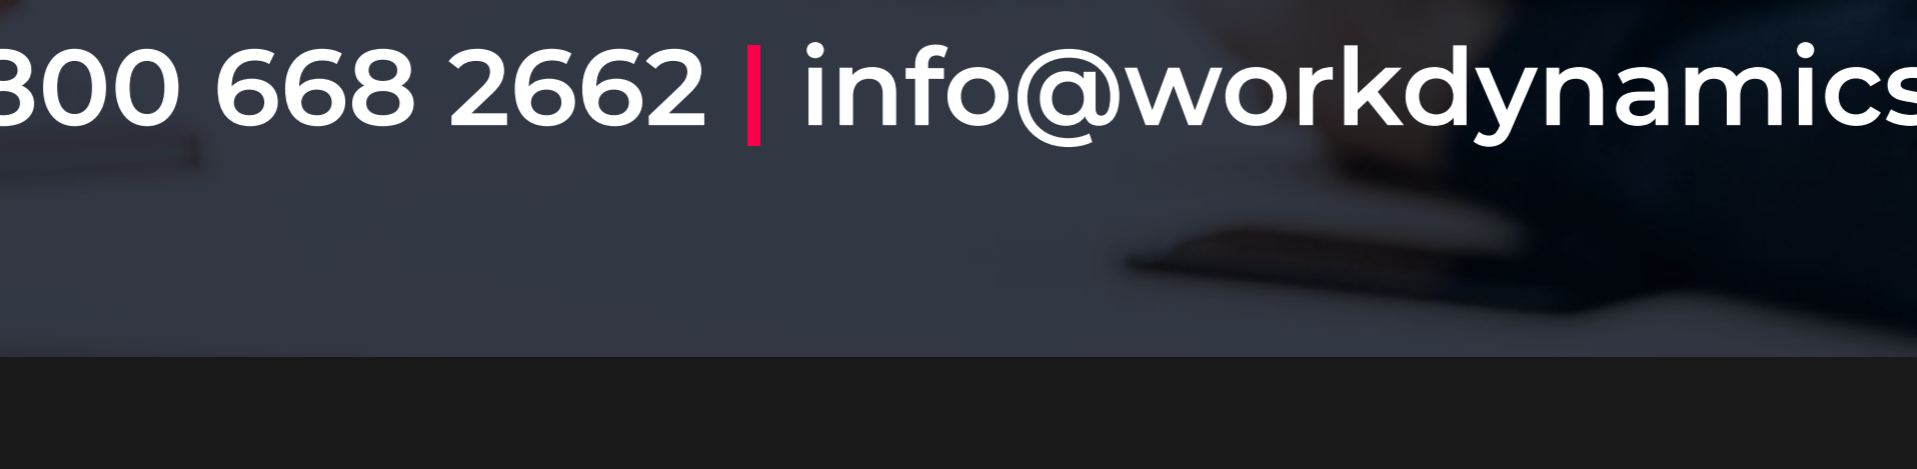

- Vastly expedite processes and workloads, all with secure data integrity
- Enhance capabilities to help manage structured and unstructured transactions
- Manage and create new insights in real time
- Enhance collaboration across multiple offices, dispersed teams and hybrid environments
- Reverse-engineer business processes to create robust, streamlined workflows
- Ensure continuous process improvements

## More Alternatives Than Ever Before

Organizations have more alternatives to SharePoint customization than ever before—solutions that often require a significantly lower investment of money, time and resources.

By choosing a comprehensive platform like WorkDynamics—one that offers no-code configuration, intelligent digital asset management, workflow creation and tracking, and business process automation while seamlessly integrating with SharePoint—organizations can minimize the risk of and even eliminate the potential for all the above-listed costs, all while still being able to use SharePoint to its fullest potential.
